Reviewing Basic Forms

- Incorrect PR Contents
- Two Column Form Layout
- Commit messages
- Using unknown properties

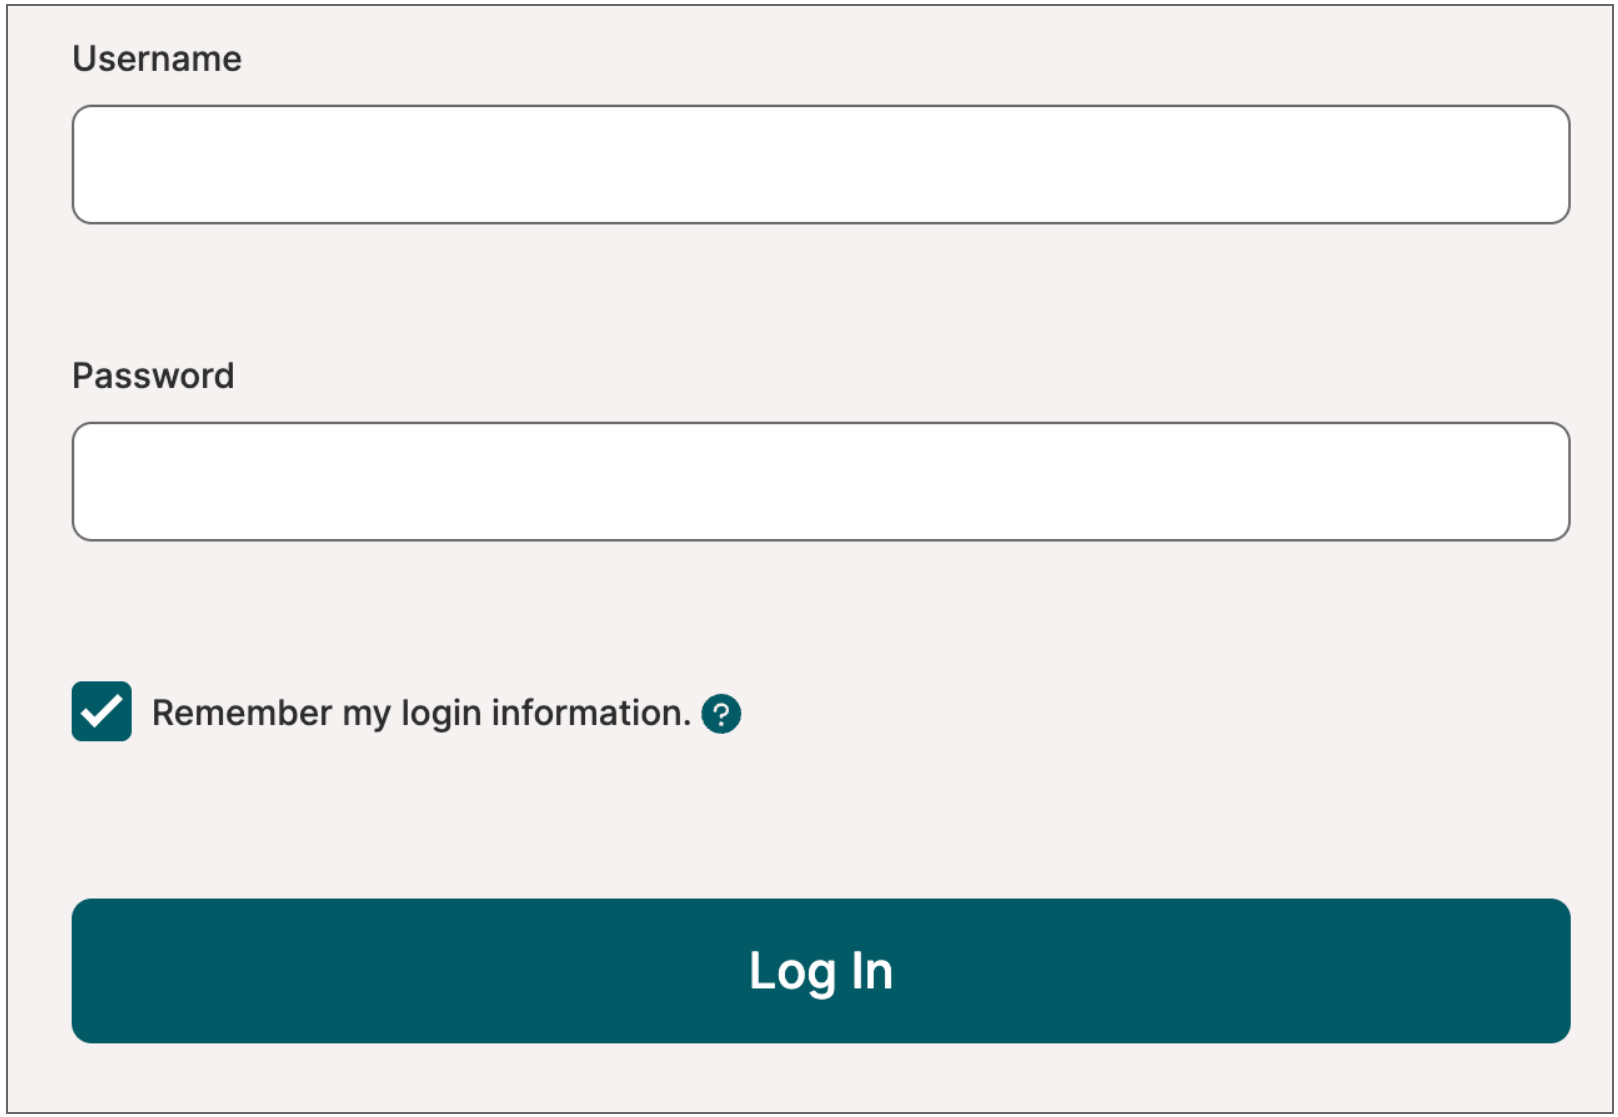

Incorrect PR Contents

- If you have `.DS_Store`, `.vscode`, `.idea` type files
- Project 1 does not have my `.gitignore`!
- You should notice these before creating the PR!
    - Avoid the embarrassment
        - Here and at jobs
    - Mistakes happen
        - Build habit of double checking
        - Only helpful if it's a habit!
    - Very low effort to check

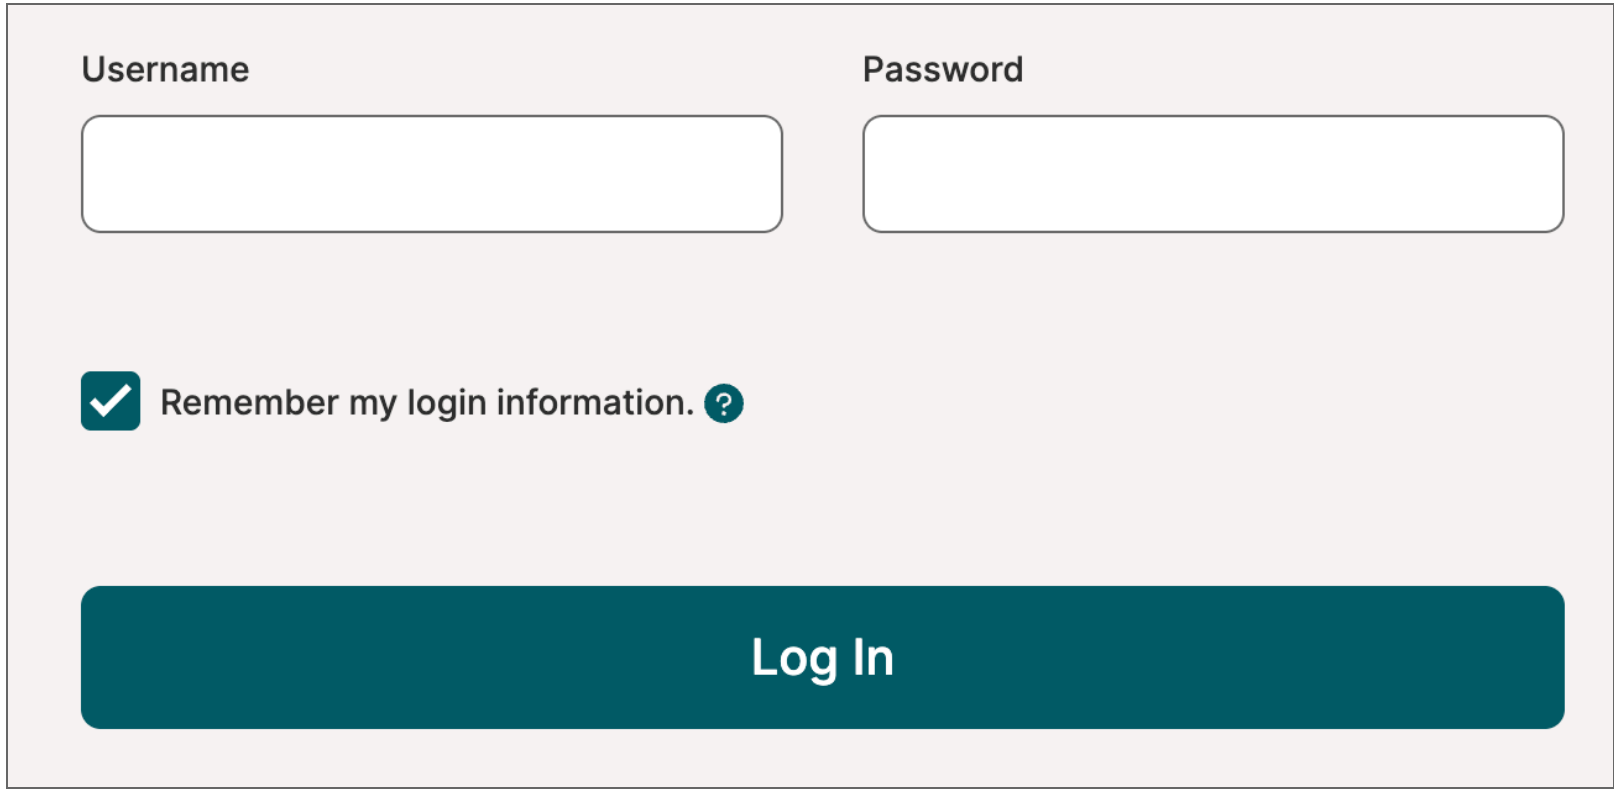

One Column vs Two Column Form layout

- Different from the grid columns we looked at previously
- All about the **label** vs **field**

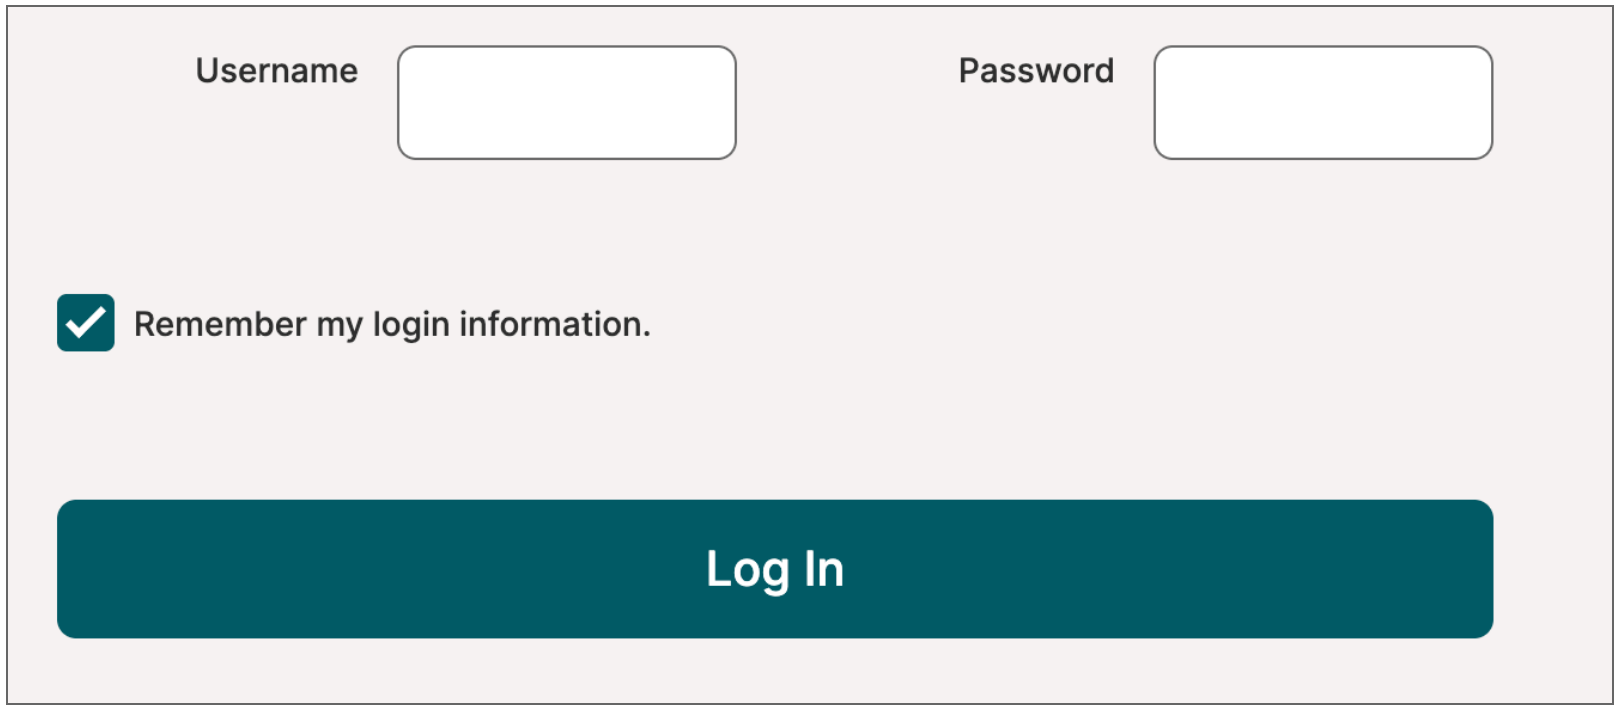

Is this One or Two Column Form Layout?

Is this One or Two Column Form Layout?

Is this One or Two Column Form Layout?

Is this One or Two Column Form Layout?

Not based on number of fields/row

Decide by looking at a label and **its** field

- Vertical stack = One column form layout
- Horizontal row = Two column form layout
- Checkboxes/radio common exceptions

Commit messages

- Mostly good!
- Room for improvement

"These changes _____"

- Fill in the blank (plural can change)
    - "The changes in this commit _____"
- Don't repeat "these changes" part
- Can add scope or detail

Examples

- Okay: `Completes assignment 3`
- Bad: `In this essay, I will...` (lots of text)
- Good: `Adds a responsive registration form`
- Bad: `Adds an index.html and styles.css`
- Good: `[assignment 3] Fixes label text alignment`
- Bad: `multiple bug fixes and performance improvements`

You may use skills we haven't yet covered

- You must complete the goal of the assignment
    - Which is more than "it works"
- You are responsible for using skills we haven't covered correctly

Some examples of skills we haven't covered

- `aria-label`
  - Allowed, but you need to use it correctly
- `onerror`/`oninput`/`onclick`
  - Not allowed (browser JS)
- `transition`
  - Allowed, but do you understand it?
- `outline`
  - Allowed, but don't change to `none`
